

SOLVE

Experts in developing packaging solutions, intellectual property

PTI provides a wide array of “Concept to Commercialization” services. We excel at finding unique solutions for your packaging challenges by evaluating materials, analyzing package performance issues, optimizing production, and providing niche manufacturing resources. For the past 30 years, our clients have challenged PTI to **develop innovative and functional packages**, which support brand equity while leveraging the latest technology.

PTI creates intellectual property for a wide variety of packaging applications including **beverage, food, personal care, household chemicals, cosmetics, pharma and more**. As the silent development partner for many of today’s well-known packages, we know how important confidentiality, performance and speed are to you.

How will your package impact the recycling stream?

For three decades, PTI has been an independent, comprehensive, consulting partner on recycling and environmental packaging issues. Today, more than ever, it is critical to know how your packaging choices are impacting the environment--particularly due to growing material reclamation initiatives.

Before you commit to what your final packaging components will be, we can assist you in determining **the recyclability of a bottle, thermoform, resin, flake, additive, colorant, label, etc.**

Our one-stop approach ensures rapid and accurate results.

Niche manufacturing

Preform Technologies, a PTI company, has established itself as the **premier manufacturer of technically-challenging, polyethylene terephthalate (PET) preforms**. The company specializes in producing smaller volume PET and polyolefin preforms for food, personal care and other applications.

Additionally, Preform Technologies can provide you with **smaller quantity runs of injection preforms, extrusion blowmolded bottles, or single/two stage reheat stretch blow-molded containers**.

We can assist with highly technical/challenging production, resin trials, test market quantities, overflow volumes, emergency runs and container (PET, PP, HDPE, etc.) production.

Recycling challenges

Broad selection of preforms

Equipped to handle highly technical and challenging production
